SLG 8.4 - Navigate
1.) console.log(), alert(), document.writeIn(), document.getElementById().innerHTML=""
2.) console.log() is used when the developer wants the output to be displayed in the browser console instead of being directly displayed/viewed on the browser.
alert() is used when the developer wants to display an output in the alert box.
document.writeIn() is used when the developer wants to display an output directly on the browser screen   .
document.getElementById().innerHTML="" is used when the developer wants to display their output through an HTML element
